

Søtorvet

Søtorvet 1, 8600 Silkeborg

Installations in the entire housing complex:

- COMFORT door stations 5,7" with built in ADK (access control) for all building entries
- 286 indoor units BS2012 audio

In 2020 AP Pension started to build a new residential district with 286 owner and rental appartements close to the Remstrup river in Silkeborg – perfectly embedded into the surrounding nature and close to the river Gudenåen. The project has high ambitions with regards to sustainability and is therefore certified with the “Svanemærket” label.

The entire housing complex consists of 8 buildings with a maximum of 7 stories and is well situated between Silkeborg Langsø on one side, and the river Remstrup Å on the other side.

Once the shell construction process is completed in early 2021, the exclusive housing project will be equipped with SKS door communication that will perfectly match the resident’s modern

lifestyle as well as the aesthetics and openness of the buildings.

All front building entries will be equipped with **COMFORT 5,7” door stations**, installed in an aluminium front plate with a built in ADK (access control) reader. Mounted directly into the raw concrete elements of the lower facades, the COMFORT 5,7” door stations will add to the modern touch and looks of the new residences.

The installation of a **BS2012 indoor unit** in all appartements will complete the building communication system. It allows easy operation for all age groups and fits perfectly into the modern interior of the apartments with their clean and elegant design.
